

Flip-Up Outfeed Support

If your shop's limited on space and you've got a cabinet saw, this outfeed support table can be a big help when ripping long stock. A couple of folding shelf brackets allow it to collapse down out of the way when it's no longer needed, saving valuable shop space.

There are a few things to keep in mind as you build the outfeed support. As you can see in the drawings, you'll need to size and position the parts to fit your saw. Make the surface of the outfeed support flush with your table saw's top. And you should make sure that the outfeed support doesn't interfere with the operation of your rip fence. Finally, the miter slots on the outfeed support should line up with those on your saw.
